

World First: In-House Legal Analytics with Automated Storytelling

With Xakia's ProReports, Legal Departments can now automate the generation of intelligent insights, empowering them to make data-driven decisions with unprecedented efficiency and ease.

Kansas City, United States, May 7, 2024 — [Xakia](#), a leading provider of legal operations software, announces the official launch of its ProReports feature, aimed at revolutionizing how legal teams access and utilize legal analytics.

“In-House Legal Department leaders understand that legal analytics are critical for effective decision-making. However, the overwhelming and time-consuming nature of data analysis – from collection, through visualization and analysis, and even into actionable storytelling – often limit their ability to fully utilize its power,” said Jodie Baker, Founder & CEO of Xakia.

“With Xakia's ProReports, General Counsel and other legal leaders can automate the generation and delivery of insights derived from legal data, allowing them to move immediately to strategic initiatives that maximize the impact of their legal teams.”

The ProReports feature empowers legal teams to automate reports with intelligent insights across three key stories:

1. **Delivery Insights:** Provides a comprehensive view of how a legal team delivers on its work, considered within the context of business strategic value.
2. **Prioritization Analysis:** Provides insights into how a legal team prioritizes its workload, with recommendations for more effective prioritization strategies.
3. **Resource Allocation:** Considers legal team allocation of resources across internal, external, and automated channels, with actionable insights for optimizing resource allocation.

One of the standout features of Xakia's Auto Reports is its ability to set up recurring reports. This automation streamlines the process of report generation and distribution, ensuring that relevant stakeholders receive data-driven stories about Legal Department delivery and strategic value, without manual intervention.

Xakia's ProReports are available today.
